

# FENTANYL

## FACING THE FACTS

Fentanyl is a fast acting synthetic opioid painkiller used for the most severe types of pain in cancer patients or anesthesia during surgery.

- Over 15 known chemical variations.
- 100 times stronger than morphine & 50 times stronger than heroin.
- Often "cut" into other drugs like heroin and pills to boost strength.
- You can't see, taste or smell it - but it is highly toxic and fatal in small doses.

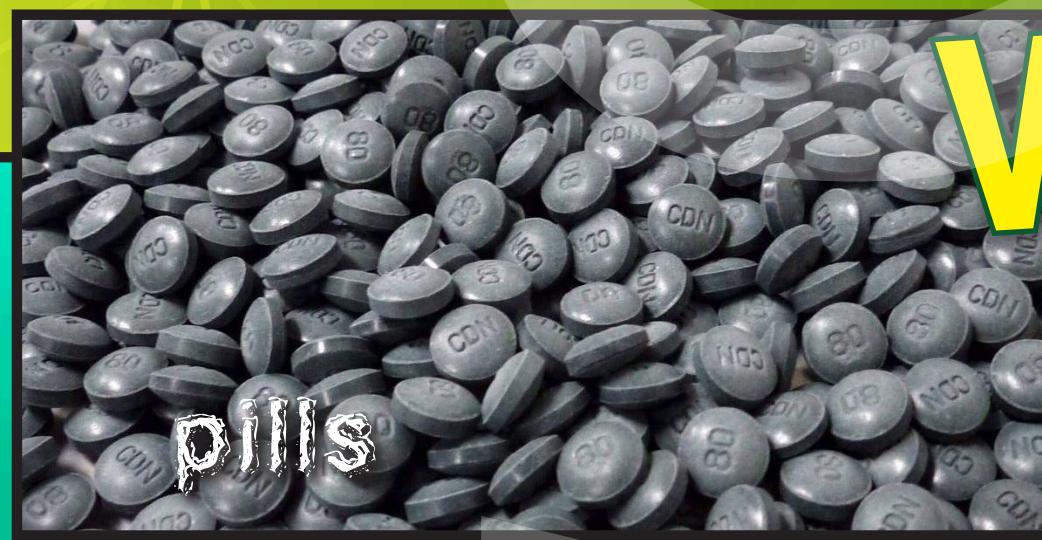

### ILLICIT FENTANYL ANALOGS

Fentanyl is also made illegally in overseas labs. These labs create different variations of illicit fentanyl to avoid drug bans.

Analogues include: Carfentanil, Furanyl-Fentanyl, Acryl-Fentanyl, 4-FIBF, Acetyl-Fentanyl

**SYNTHETIC OPIOID USE JUMPED 79% IN ONE YEAR.**

## WHAT'S IT LOOK LIKE?

Fentanyl can look like anything a dealer wants it to. Most users don't even realize they are taking fentanyl. It is commonly mixed into heroin or made into counterfeit pills.

Fentanyl was found in Xanax, Oxycodone, and Norco. DEA seizures of these drugs have increased 2,019% in the last five years.

## STREET NAMES

Apache, China Girl, China Town, Dance Fever, Friend, Goodfellas, Great Bear, He-Man, Jackpot, King Ivory, Murder 8, and Tango & Cash

## WHY FENTANYL?

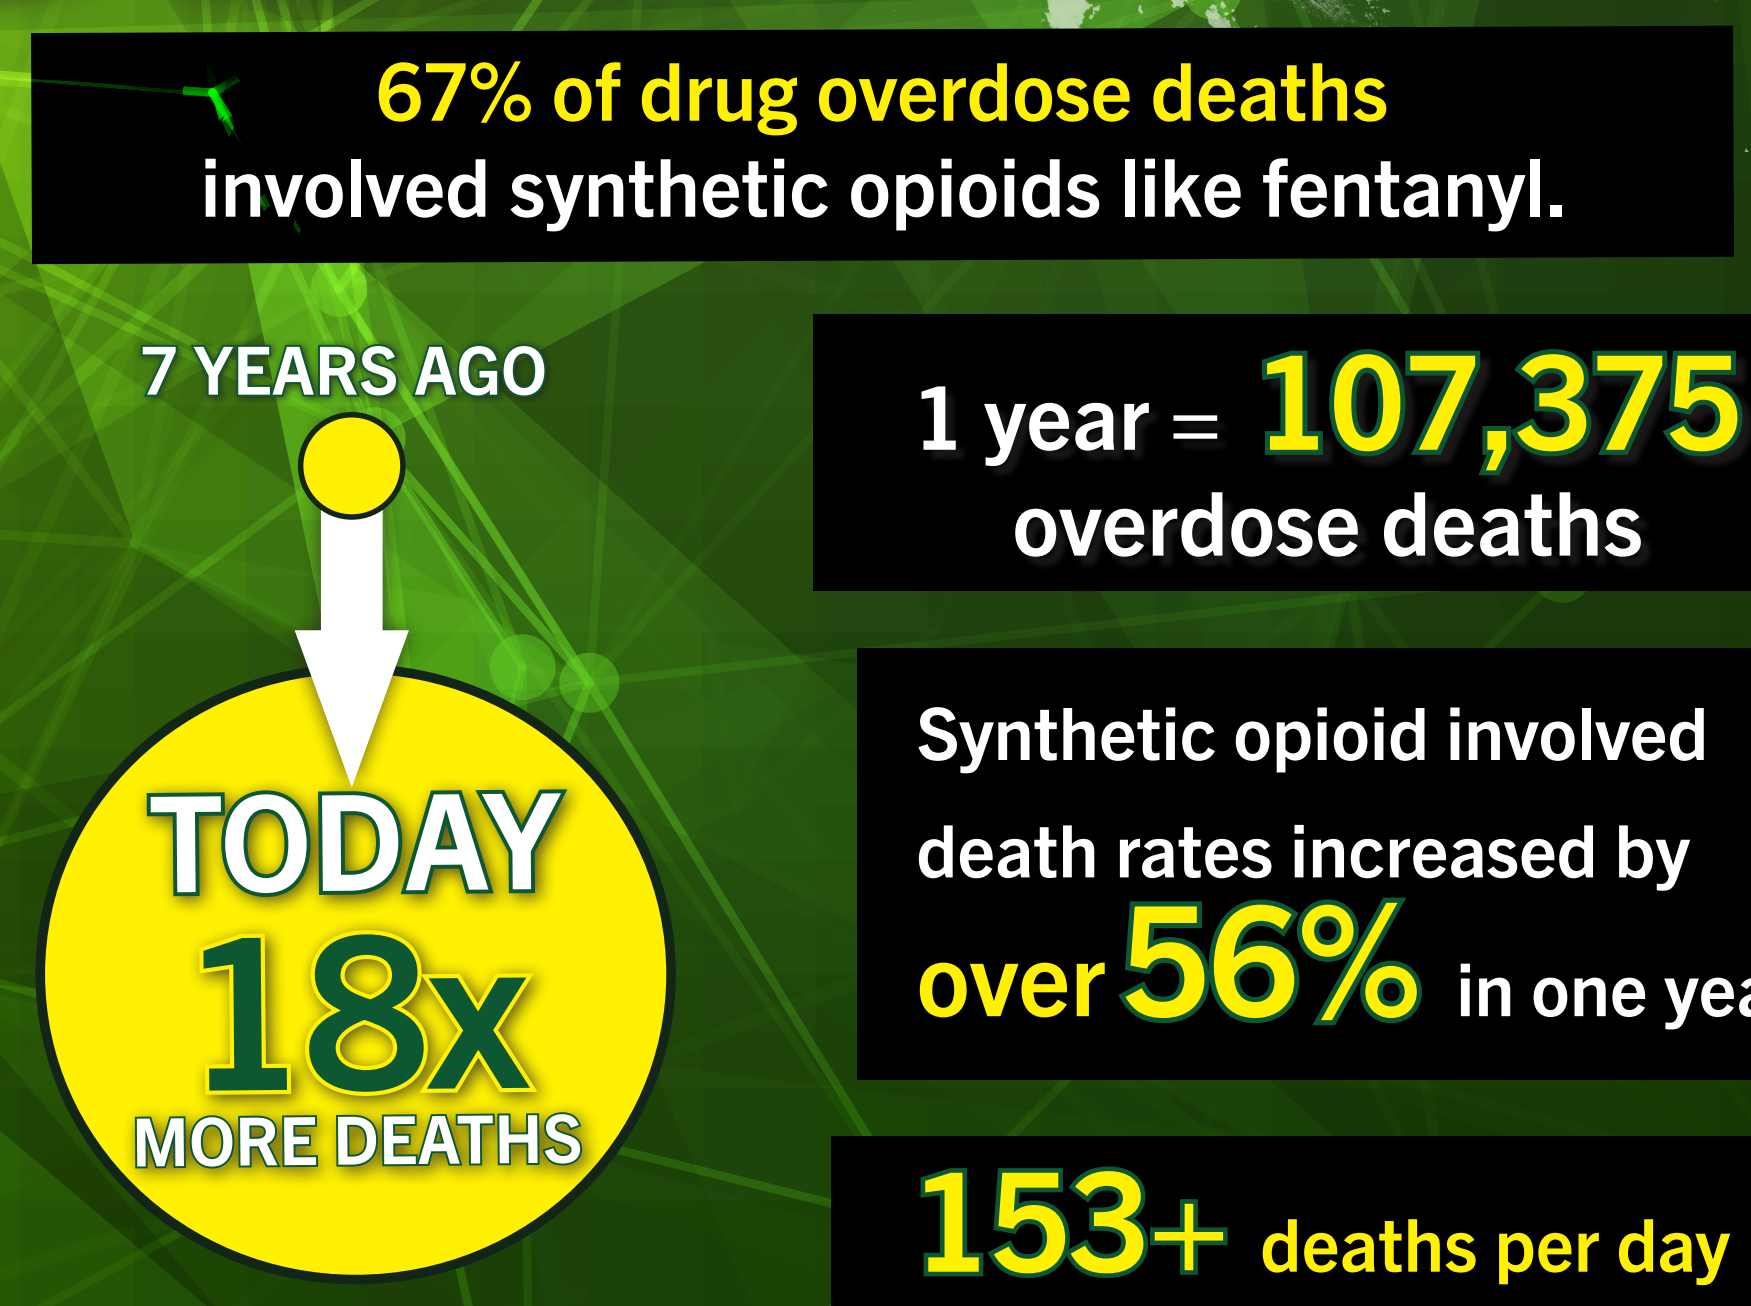

- Cheaper
- Stronger
- Easier to get and hide

# QUICK & DEADLY

Fentanyl **OVERDOSE** can happen immediately, even before the drug is fully injected.

- Difficulty breathing
- Clammy/cold skin
- Loss of consciousness
- Seizures
- Pinpoint pupils
- Low blood pressure
- Slow or no heartbeat

**AVOID THE RISK!**

## WHAT'S IN THAT POWDER OR PILL

## WHO KNOWS?
