

# SYNTHETIC COCAINE

Synthetic cocaine is a chemical alteration of cocaine, which can be different from package to package. Physical effects can be severe and unpredictable. In this regard, it can be more dangerous than real cocaine.

Many of these drugs can be found online, in convenience stores, and head shops. They are usually marketed with the warning label “Not intended for human consumption.”

## DRUG\_I.D.

**Looks:** Usually a fine white or off white powder; packaged in 200 or 500 mg plastic or foil pouches

**Street Names:** Blue Silk, Cloud Nine, Drone, Energy-1, Ivory Wave, Lunar Wave, Meow Meow, Ocean Burst, Pure Ivory, Purple Wave, Red Dove, Snow Leopard, Stardust, Vanilla Sky, White Dove, White Knight, White Lightening

**Methods of Use:** Usually sniffed or snorted. Can be taken orally, smoked or put into a solution to inject in the veins.

**Actions:** An addictive stimulant which gives high energy to begin with, but users become agitated and experience hallucinations.

**Warning Signs:** Chest pain, nosebleeds, seizures, panic attacks, vomiting

## TRAGEDIES

Calls to Poison Control Centers, as a result of contact with Synthetic Cocaine, increased 20 times in 2011 from 2010 to 6,138 calls.

Bath Salts use has appeared on drug test results as long as 72 hours after last use.

## USING\_OVER\_TIME

- Addiction
- Paranoia
- Suicidal thoughts
- Seizures
- Depression

## WAY\_TO\_GO

Synthetic cocaine is an unregulated and unpredictable substance. Putting this in your body can result in dangerous and sometimes deadly consequences. They are not a “safe” or “legal” alternative to real cocaine. They serve the same purpose: To get you addicted, so you buy more and make dealers richer.
